

# Production Checklist (Step-by-Step)

## 1. Finalize Core System (No More Feature Creep)

- ✗ Naye features add karna bandh kar
- ☒ Ensure:
  - Skill extraction working
  - Normalization working
  - Matching / output stable

🔗 Rule: “*Works > Fancy*”

---

## 2. Project Structure Clean Kar

Tera repo clean hona chahiye:

```
project/
├── app/
│   ├── main.py
│   ├── skills.py
│   ├── normalize.py
│   └── extractor.py
├── data/
│   └── skills.json
├── requirements.txt
├── README.md
└── .gitignore
```

🔗 Agar structure messy hai → koi bhi serious banda use nahi karega.

---

## 3. ⚡ API Bana (FastAPI Recommended)

Use:

- FastAPI

**Basic endpoints:**

- `/extract` → resume se skills nikaal
- `/match` → job vs resume compare

🔗 Example:

```
@app.post("/extract")
def extract_skills(text: str):
    return extractor(text)
```

---

## 4. Testing (Ignore mat karna)

- 10–20 resumes test kar manually
- Edge cases:
  - typo ("pyhton")
  - short resume
  - overloaded resume

☞ Agar yaha fail → production me bhi fail

---

## 5. Simple Frontend (Optional but Powerful)

Use:

- React

Features:

- Resume upload
- Extracted skills show
- Match score show

☞ Truth: UI = perceived value × 10

---

## 6. Deployment (Yaha game change hota hai)

**Backend deploy:**

- Render (easy)
- Railway
- AWS (advanced)

☞ Beginner ke liye:

- Render best hai
-

## 7. 🐳 Dockerize (Optional but Pro Move)

Use:

- Docker

👉 Why:

- Same app runs everywhere
  - Recruiter impressed
- 

## 8. 📊 Logging + Monitoring

- Basic logs add kar:

```
print("Extracted skills:", skills)
```

Advanced:

- logging module use kar

👉 Debugging hell se bach jaega

---

## 9. 🗝️ Environment Variables

- API keys hardcode mat kar
  - Use `.env`
- 

## 10. 📄 README Strong Bana

Include:

- Problem statement
- Features
- Demo
- How to run
- Screenshots

👉 Ye tera **sales page hai**

---

## 11. 🎯 Final Polish

- Response time fast hona chahiye
- Clean JSON output
- Error handling:

```
if not text:  
    return {"error": "Empty input"}
```

---

## ☐ Brutal Truth

Agar tu yaha ruk gaya:

“project bana liya, bas ho gaya”

→ tu 90% logon jaisa ban jayega

Agar tu isko deploy + polish karta hai:

→ ye **portfolio weapon** ban jayega

---

## ⚡ Next Move (No Overthinking)

1. FastAPI API bana
  2. Render pe deploy kar
  3. Ek simple UI bana
  4. LinkedIn pe post daal
- 

Agar chahe to main:

- tera **FastAPI code likh deta hoon**
- ya **Render pe deploy step-by-step** kara deta hoon

Bas bol — next kya chahiye 🎯
